# User Manual

Introduction

This app is to be used by anyone to send greetings across the globe via AR. Users can create their own username and password to save certain data that they come across on the app. However for the AR features to work on the mobile version, the user must have a mobile device with Android 7.0 or IOS 11. A username and password is also required in order to post content on the app.

## Log in

Users can login to their accounts here, or register an account.

Finding a greeting card

To find a message, the user can either scroll through the available templates, or search for key terms in the search bar to narrow down the results.

Alternatively, they can select the category section, and narrow down their choices to a specific holiday.

Sending a greeting message

Once a message has been selected, the user can then add additional text to the card, then send it via a link, QR code, or via alternative messaging apps such as WhatsApp

Liking, Saving and Commenting

On the selected card, the user can click the star to save the card for later use, the heart to show appreciation or type a comment out, and can view other comments. The liked and saved cards will appear in the user profile section of the app.

Posting

By pressing the post button in the profile section, the user can upload their own app. First the user must decide whether they want to upload an image or video. Then the user must have the following information:

- Title
- Category
- PlugXR ID
- Description
- Image Header

Once the user provides all of this, they can submit the card and it will automatically be uploaded to the database for anyone to use, and they can view it in their posts sections.

Summary

Our app is easy an intuitive to use, and users will easily get the flow of using it once they start. We hope to see a wide selection of new greetings from the community.
